

THE EGLO SERIES

The EGLO series is spherical lamps in different sizes.

Spherical lamps has the advantage, that it can emit illumination in all directions only leaving a small shadow in top. This makes these lamps perfect for colored illumination, because the color will affect the entire room or place, where it is put. Below the -15- and the -30-

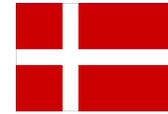

DISCRETE LAMPS

When the lamps are switched off, they appear white. In LED technology the color only appears when the power is switched on. No color filters are used.

TrueColors

RGB-Lamps

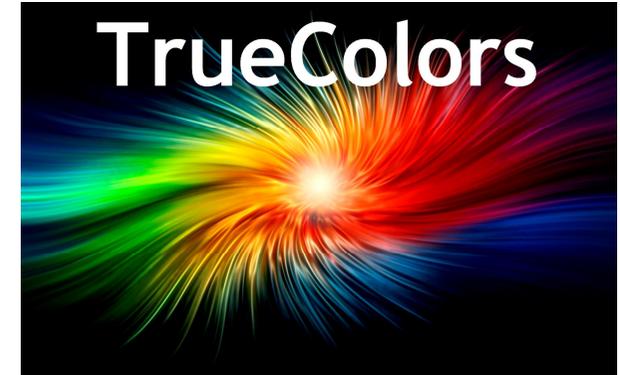

We have some of the world's most beautiful purple colors. Purple is not a "real" color. It can only be made by either mixing or filtering.

BRIGHTEN UP YOUR LIFE WITH COLORS.

USING COLORS

Using colored illumination is very different from using ordinary white light sources.

Colored illumination can not replace ordinary white light, but it is a great supplement, that can reduce the use of white sources and thereby save a lot of energy. Also it can add comfort and pleasure to places where it is used.

Colors affect our hormone system, and can even change the way we feel a temperature. Some colors are cozy, and create moods.

As guidance illumination, especially at night it is ideal, because of the very low energy consumption.

As illumination art, it adds value and unique expressions.

We have a blog, where questions can be asked about using colored illumination. Where you can get inspiration, and where you can learn a lot about the effects of colors on both humans, animals and plants.

SPECIAL DESIGNED BULBS AND MATCHING LAMPS:

All colored bulbs are using LED technology. Only the best selections of LED are used, which ensure low energy consumption, long lifetime and very high efficiency. And it is made in Denmark.

THE MIXING OF COLORS

Our bulbs, each contains 37 high efficiency diodes. Each diode emits only one color, but if colors are mixed, any color can be made. Mixing the colors to form new colors are done by aid of a special lens, which in combination with special selected lamps makes unique colors.

Only lamps with properties matching our bulbs, makes the setup perfect.

THE LAMPS

Only lamps with matching properties can be used. That is why we are selling bulbs combined with lamps. Then we are sure, all our customers will get the perfect experience from our beautiful illumination.

All lamps will match with all colors, so any of the bulbs can be used in any of our lamps. If a

color change is wanted, the bulb only needs to be replaced with another.

NEW PRODUCTS

In time, our product range will be extended. We plan to develop our own brand, and also add more lamps from our subcontractors. But all has to be matched carefully with our bulb design before it can be released.

New products will be released in our website, shortly before they will be available in our shops. You can sign up for a newsletter, if you want to follow the product releases.

Send a mail to

webmaster@rgb-lamps.com

requesting the newsletter. The newsletter is available in Danish or English.
